VISUAL

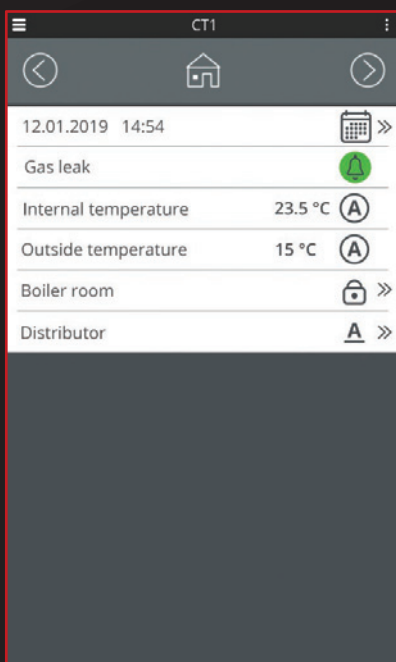

Merbon Visual App

With the Merbon Visual app, the display of your process station is always at hand. The app allows remote operation of freely programmable Domat PLCs for HVAC control.

Connection to more PLCs

Overview of the whole building or heat exchangers network **in your mobile device.**

Profile selection for local or Internet access

Simple and fast switching between profiles if different access data are required for different connection types. According to user's **access level**, values such as temperature, humidity, pressure, light intensity etc. can be read and written, including **alarm acknowledgement** and **time scheduler setting**. The HT200 terminals, which are usually accessible to more persons, may have defined several user policies with different rights.

Energy under control
www.domat.cz

Alarm summary - overview of alarms according to user's rights

Fast and easy check of technology status.

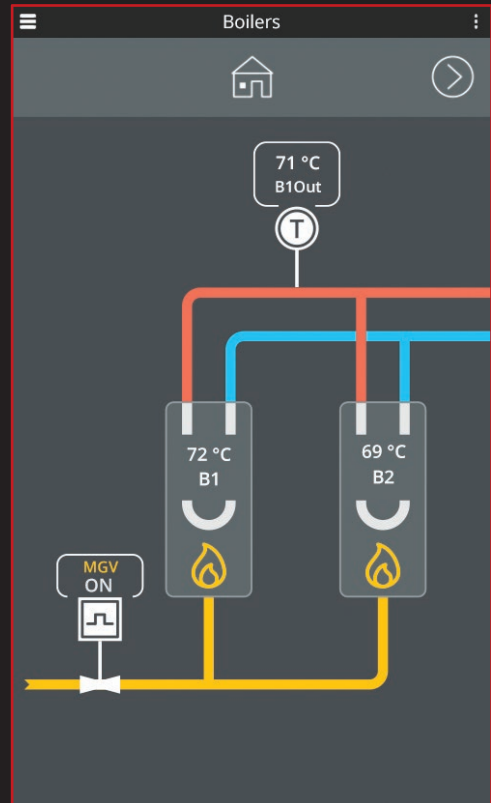

Display of active alarms and alarm log from Merbon PLCs

Alarm history helps to diagnose problems faster.

Multitouch and gesture support

Control as we know it from standard mobile apps. Use either a structured tree menu similar to this at the LCD display with the LCD menu definition file, or graphic panels with predefined schemas populated by live values.

Convenient multi-project management

Enhanced menu for fast configuration, now made easy for every user.

New: Menu and panel definition downloadable directly from a Merbon PLC

- just enter the IP address and username / password of the PLC!
