

## M420 Modbus table

16 DI

Release 16.1.2012 ver. 00300

**domat**  
control system

- **max 11 words may be read out as a whole (i.e. 22 bytes)**
- **first 176 bits can be addressed bitwise (i.e. the whole map)**

Name	Address	Type	Description	Note
module ID LSB	1 LSB	R	module identification lower byte	module ID is 0042hex
module ID MSB	1 MSB	R	module identification upper byte	
firmware LSB	2 LSB	R	firmware version lower byte	3hex
firmware MSB	2 MSB	R	firmware version upper byte	
status LSB	3 LSB	R, W RAM	module status lower byte <b>bit 0</b> - EEPROM write enable	
status MSB	3 MSB	R	module status upper byte <b>bit 0</b> - 0 normal mode - 1 init mode <b>bit 1</b> - 1 at the next EEPROM write attempt all data will be saved to EEPROM - 0 at the next write attempt received data will be written to RAM only <b>bit 2</b> - reserved <b>bit 3</b> - reserved <b>bit 4</b> - 0 <b>bit 5</b> - 1 <b>bit 6</b> - 0 <b>bit 7</b> - 1	
<b>address</b>	4 LSB	R,W EEPROM	module address	The changes will become active only after module restart (the register is written immediately, but the new address is effective after restart)
baud rate (communication speed)	4 MSB	R,W EEPROM	no parity 10 <sub>dec</sub> ... 1200 bps 11 <sub>dec</sub> ... 2400 bps 12 <sub>dec</sub> ... 4800 bps 13 <sub>dec</sub> ... 9600 bps 14 <sub>dec</sub> ... 19200 bps 15 <sub>dec</sub> ... 38 400bps 16 <sub>dec</sub> ... 57 600bps 17 <sub>dec</sub> ... 115 200bps	The changes will become active only after module restart (the register is written immediately, the new baud rate is effective after restart)
input states low	5 LSB	R	readouts of the inputs	bit 0...input DI1 .. bit 7...input DI8
input states high	5 MSB	R	readouts of the inputs	bit 0...input DI9 .. bit 7...input DI16

# M420 Modbus table

16 DI

Release 16.1.2012 ver. 00300

latched value low	6 LSB	R	<p>cached values</p> <p><b>0</b> – if since latch enable the latched state has not been detected at the input</p> <p><b>1</b> - if since latch enable the latched state has been detected at the input</p>	<p>reset of individual bits: disable and enable the corresponding bits – see register <b>latch enable</b></p> <p>bit 0...input DI1</p> <p>..</p> <p>bit 7...input DI8</p>
latched value high	6 MSB	R	<p>cached values</p> <p><b>0</b> – if since latch enable the latched state has not been detected at the input</p> <p><b>1</b> - if since latch enable the latched state has been detected at the input</p>	<p>reset of individual bits: disable and enable the corresponding bits – see register <b>latch enable</b></p> <p>bit 0...input DI9</p> <p>..</p> <p>bit 7...input DI16</p>
latch state low	7 LSB	R,W EEPROM	<p>state to be caught</p> <p><b>0</b> – log. 0</p> <p><b>1</b> - log. 1</p>	<p>bit 0...input DI1</p> <p>..</p> <p>bit 7...input DI8</p>
latch state high	7 MSB	R,W EEPROM	<p>state to be caught</p> <p><b>0</b> – log. 0</p> <p><b>1</b> - log. 1</p>	<p>bit 0...input DI9</p> <p>..</p> <p>bit 7...input DI16</p>
latch enable low	8 LSB	R,W RAM	<p>latch function enable for each input – if set to <b>1</b> the <b>latched value</b> bit goes to 0 and stays so until the latched value is detected;</p> <p>after RESET the register is set to 0</p>	<p>reset the <b>latched value</b> register bits to 0 by changing the value of <b>latch enable</b> bits from 0 to 1 (= disable and enable latching for individual bits)</p> <p>bit 0...input DI1</p> <p>..</p> <p>bit 7...input DI8</p>
latch enable high	8 MSB	R,W RAM	<p>latch function enable for each input – if set to <b>1</b> the <b>latched value</b> bit goes to 0 and stays so until the latched value is detected;</p> <p>after RESET the register is set to 0</p>	<p>reset the <b>latched value</b> register bits to 0 by changing the value of <b>latch enable</b> bits from 0 to 1 (= disable and enable latching for individual bits)</p> <p>bit 0...input DI9</p> <p>..</p> <p>bit 7...input DI16</p>
uptime 1	9 LSB	R	<p>time in seconds since module power-up or reset</p>	LSB
uptime 2	9 MSB	R		
uptime 3	10 LSB	R		
uptime 4	10 MSB	R		MSB

## M420 Modbus table

16 DI

Release 16.1.2012 ver. 00300

**domat**  
control system

number of EE write cycles 1	11 LSB	R	number of EEPROM writing cycles (address, baud rate, range...), just for information	counter 0...FFFE; no overflow. When FFFE is reached, the counter stops.
number of EE write cycles 2	11 MSB	R
